

Meridian Industrial Corp.
Defined Benefit Pension Plan
Summary Plan Document and Actuarial Notes Disclosure – Current Fiscal Year

1. Benefit Formula

The Plan provides a final-average-pay benefit equal to 1.5% of a participant's final five-year average compensation, multiplied by years of credited service, payable as a single life annuity at normal retirement age 65. Credited service continues to accrue for all actively employed participants under the terms described in Sections 3 and 4 below.

2. Actuarial Notes – Interest Cost and Expected Return

Interest cost for the current fiscal year has been computed by the Plan's actuary reflecting the current-period discount rate and is disclosed separately in the actuarial assumptions workbook. Expected return on plan assets has similarly been computed reflecting the current-period long-term rate of return assumption.

3. Plan Amendment – Accrual Freeze

Effective September 1 of the current fiscal year, the Plan was amended to freeze future benefit accruals for all participants hired on or after January 1, 2010. Participants hired before January 1, 2010 ("Grandfathered Participants") continue to accrue benefits under the existing formula described in Section 1 without change, through the remainder of the current fiscal year and thereafter until a further amendment is adopted.

No other terms of the Plan were changed by this amendment.

4. Separation from Service

Independent of the amendment described in Section 3, credited service accrual for any participant ceases as of that participant's individual date of separation from service, regardless of the participant's group under Section 3. A participant who separates from service prior to September 1 of the current fiscal year accrues service cost only through that participant's own separation date, not through September 1. This rule applies without exception and is unaffected by, and independent of, the Section 3 amendment.

Separation data for the current fiscal year is provided in the plan's separations log. This amendment does not affect vested-terminated or retired participants' previously accrued (frozen) benefit obligations, which are unaffected by either the freeze or ongoing separations.

5. Amortization of Net Actuarial Loss

The unrecognized net actuarial loss as of the beginning of the current fiscal year is being amortized on a straight-line basis over the average remaining service period of active plan participants. The current-period amortization amount is disclosed in the amortization schedule workbook and is unaffected by Sections 3 or 4 above.
